Northwestern Division's Mission

The Northwestern Division of the US Army Corps of Engineers offers a wide range of services to its military and civilian customers. The Division has two regional offices located in Portland, Oregon, and Omaha, Nebraska, which provide direction and guidance for five subordinate districts. They also perform regional interface involving the upward coordination of technical policy and budgetary issues which cross district boundaries, as well as interface with many other Federal and state agencies, congressional leaders, interest groups and international commissions. It is in the regional offices where oversight actions for the management, coordination and analysis of various Division-wide programs are performed. The quality assurance role of the regional offices ensures that processes, procedures, and activities performed by the districts result in top quality products and services to Corps customers.
